Slips and bones as of age six

for **The Fictional VolunTier Project**

by Goura Fotadar

date on: 01/20/19

tag[s]: brief notes, us marsha* fire frameworks examine from the height of *nobel* childhood

current *cited: sharpstone* patterns (to use)

(in efficacy← to cause it):

    a) Scapegoat -> fake gloat
    b) Winner
    c) Reliable

d) Dead
e) Pretense
f) Straddle (results are … <-)

Theme: I love you, James!

Options: stealing income converted by thieves [in loss to fire entropy work] to stealing in: come [as in fire drills as in: come entry and presence in a building and or space and or quarantine, where they don't belong and shouldn't be], theft, or organization
Mandated: go with bog (here) **theme: a different thinker**

Part two. So age six!

date, on: 2.2819

cited: p.288, #78, PETERSON'S, 17th Edition,

Source, citation: MASTER THE FIREFIGHTER EXAM

   A palindrome on how society keeps society [uh, itself] from conceiving to win *cited: nobel prizes*; so it's true that [A] is the next best answer … but [D] and not [A] is the most correct answer; which is not what the answer key, says.

  How would you complete this in a fire drill; of course you would control for especially "humidity" likely at first not changing "the temperature" keeping a semi-accurate measure of its change where humidity is on a different factor [than temperature]. Why use humidity though it doesn't have to be at first; but at first would bring the best results [herein application context]. One reason is the actual meaning of "humidity" is the same or similar enough to "cup" and "bowl" … something else to recall … is that sight of "the cup" and "the bowl" is a cue.
